Student visa with work rights | Available for full-time graduate employment from December 2026

Profile

Full-stack software engineer and final-year Software Engineering student with 1+ year of commercial experience shipping production web, mobile, and AI-enabled products. Treat AI as an engineering system: decompose work across parallel agents, isolate changes in Git worktrees, and validate outputs through human review, automated tests, and real app interaction. Hands-on across React, TypeScript, JavaScript, Python, backend workflows, cloud infrastructure, and end-to-end delivery.

Core Skills

Languages: TypeScript, JavaScript, Python, SQL, Swift

Frontend & Full Stack: React, Next.js, TanStack Start, Node.js, HTML, CSS, REST APIs, WebSockets

Backend & Data: Convex, PostgreSQL, Supabase, multi-tenant architecture, indexed pagination, background workflows

Agentic Engineering: Cursor Design mode, parallel Codex and Claude Code agents, Git worktrees, Codex Computer Use, human-led review and integration

Cloud & Quality: AWS, self-hosted Convex, Playwright, Vitest, GitHub Actions, CI/CD, production monitoring

Delivery: End-to-end feature ownership, problem decomposition, cross-functional collaboration, production releases

Professional Experience

Besmak Components

Remote

Software Engineer (Independent Contractor)

Jul 2026-Present

- Own hands-on delivery of a web and mobile operations platform for 600 users across TanStack Start, React Native/Expo, and tenant-safe real-time backend workflows.
- Coordinate parallel Codex and Claude Code agents in isolated Git worktrees for scoped implementation and review; use Cursor Design mode for interface iteration and Codex Computer Use to exercise logged-in product flows, reproduce defects, and verify fixes.
- Led adoption of self-hosted Convex on AWS; manage deployment, monitoring, backups, security, cost control, and scaling for backend and file services.

Complete Leader

Melbourne, VIC

Software Engineer (Casual)

Dec 2025-Present

- Partner with the founder to turn in-person psychometric testing and manual reports into a Next.js and Supabase assessment, scoring, reporting, and role-based client platform.

Kenspire Advisors

Remote

Software Engineer (Contract)

Oct 2025-Present

- Use Codex and Claude Code to audit authorization and performance, design bounded Convex migrations and backfills, and pressure-test changes while retaining human ownership of architecture, schema cutovers, and releases.
- Own full-stack delivery with TanStack Start and Convex, including access control, regression testing, CI/CD, production releases, and schema and data migrations across web and mobile products.
- Architect for a planned rollout to 500 client organisations, validating target workloads through end-to-end and backend stress tests.

Mindtek AI

Melbourne, VIC

Software Engineer

May 2025-Oct 2025

- Built a multi-tenant retrieval-augmented generation platform in Next.js and Supabase, then shipped an embeddable third-party chat widget and a real-time voice-receptionist kiosk using Gemini Live.

Selected Engineering Projects

Foodly – Social-to-Place Restaurant Discovery

Final-Year Project, Mar 2026-Present

- Co-built a web and React Native product that turns Instagram Reel and TikTok links into mapped restaurant places through Apify, Gemini, and Google Places, with shareable lists and community discovery.
- Engineered retry-safe ingestion, indexed cursor pagination, aggregate counters, resumable deletion and privacy workflows, and 102 automated tests across 19 backend test files.

ParkAlong – Trust-First Victorian Parking Finder

github.com/OpenRenderKit/ParkAlong

- Built and shipped a native parking product combining live City of Melbourne occupancy with 34,023 integrity-manifested Victorian records, backed by viewport-driven loading, generation-safe refreshes, CI, and deterministic unit and UI tests.

Education

Swinburne University of Technology

Hawthorn, VIC

Bachelor of Engineering (Honours), Software Engineering

Graduating: Dec 2026
