PROFESSIONAL EXPERIENCE

Kenspire Advisors

Apr 2026 – Present

Software Engineer, Contract

- Own the architecture and delivery of Kenspire's multi-tenant platform, which turns clients' goals and operating procedures into scheduled work, ahead of a planned rollout to 500 organisations.
- Built the web (TanStack Start) and mobile (Expo) apps on a Convex backend: maker, checker, and reviewer approvals, recurring schedules, timesheets, goal tracking, analytics, passkey sign-in, and iOS Live Activities.
- Built an agent harness for Gemini to edit procedure drafts via tool calls and Google Search grounding.
- Replaced 62 aggregates behind 118 of 167 GB of billed I/O with exact counters that showed zero drift in production. Separately cut daily scheduling reads from 57.8 to 36.3 MB per run, a 37% reduction.

Besmak Components

Jul 2026 – Present

Software Engineer, Contract

- Lead development of Besmak's web and mobile task platform, being rolled out to about 600 staff across departments, with end-to-end tests for both apps.
- Built recurring tasks with subtasks as a resumable background workflow with checkpoints, duplicate-safe retries, and daylight-saving-correct dates, tested at 600 subtasks and 600 users within Convex transaction limits.
- Provisioned and maintain Besmak's AWS backend with OpenTofu, running Convex on EC2 with Multi-AZ PostgreSQL, encrypted S3, TLS, and backups. Tested a 40-second database failover.

Complete Leader

Dec 2025 – Present

Software Engineer, Casual

- Built Complete Leader's psychometric assessment platform in Next.js and Supabase, replacing paper questionnaires and hand-written reports with online assessments, scoring, and streamed AI-generated reports.
- Built the staff dashboard for inviting clients, reviewing results, and exporting assessment data.

Mindtek AI

May 2025 – Oct 2025

Software Engineer

- Built a multi-tenant Next.js and Supabase platform where businesses create OpenAI and Gemini chatbots grounded in their own documents, embed them on their websites, and review conversations, leads, and analytics.
- Built a voice agent harness on the Gemini Live API that answers spoken enquiries and takes booking requests through tool calls, recovering from model and tool failures.

PROJECTS

Foodly *Final-year honours project* foodly-app-mauve.vercel.app

Mar 2026 – Present

- Wrote the backend and most of the iOS app for a team product that turns Instagram and TikTok restaurant posts into saved places on a personal map.
- Built the AI pipeline that fetches posts with Apify, identifies restaurants using Gemini with Maps grounding, and verifies them with Google Places. Caching, retries, and idempotent webhooks make reruns safe, and embeddings power search.

ParkAlong *Native iOS app* github.com/OpenRenderKit/ParkAlong

Aug 2026 – Present

- Built a SwiftUI and MapKit app that combines live City of Melbourne bay sensors, time limits, prices, and 38,000+ statewide parking records into one map, clearly labelling live versus static data.
- Made catalog loading 43 times faster (23.3 to 0.53 seconds) by profiling the decoder and reusing date parsing, then added a spatial index for map queries. Covered by 160 unit and UI tests in CI.

Open source

- **Codex Shared Memory**: Python/SQLite MCP server that syncs AI agent memory across devices, self-hosted on a Raspberry Pi over Tailscale.
- **pptx-react-renderer**: npm package that renders PowerPoint files as HTML, with pixel-diff regression tests.

EDUCATION

Swinburne University of Technology

Graduating Dec 2026

Bachelor of Engineering (Honours), majoring in Software

High Distinctions: Concurrent Programming (98), Data Structures and Patterns (86), Intro to AI (83), AI Engineering (82)

TECHNICAL SKILLS

Languages TypeScript, JavaScript, Python, Swift, SQL, C++

Web and mobile React, TanStack Start, Next.js, React Native/Expo, SwiftUI, MapKit

Backend and data Convex, Node.js, PostgreSQL, Supabase, SQLite

Cloud AWS (EC2, RDS, S3, ALB), Cloudflare (Pages, Workers), OpenTofu, Docker

Testing and CI Playwright and Maestro (E2E), Vitest, XCTest, GitHub Actions

AI Gemini and OpenAI APIs, tool calling, RAG, embeddings and vector search, MCP

Coding agents Codex, Claude Code, Cursor, OpenCode, T3 Code
